

## Data sheet for calculating the carbon footprint of printing/writing paper based on the 10 toes of CEPI framework

|                                    |   |
|------------------------------------|---|
| <b>Company</b>                     | Holmen Paper                                |
| <b>Mill</b>                        | Hallsta Paper Mill, Sweden                  |
| <b>Reporter's name and email</b>   | Johan Sidenmark, johan.sidenmark@holmen.com |
| <b>Paper quality</b>               | Holmen BOOK                                 |
| <b>Period for validity of data</b> | 2021  |

| 10 Toes of CEPI Framework  | Fossil CO <sub>2</sub><br>(kg per tonne paper) | Biogenic CO <sub>2</sub><br>(kg per tonne paper) |
|--|--|--|
| 1. Carbon sequestration in the forest                                    |  |  |
| 2. Carbon stored in the product  |  | -1488  |
| Net sequestration of biomass carbon                                      |  |  |
| 3. GHG emissions from pulp and paper production                          | 1.4  |  |
| 4. GHG emissions associated with producing virgin or recovered fibre     | 30.0   |  |
| 5. GHG emissions associated with producing other raw materials           | 16.1   |  |
| 6. GHG emissions associated with purchased or sold electricity and steam | 25.6   |  |
| 7. Transport-related GHG emissions                                       | 19,7   |  |
| 8. GHG emissions attributable to product use (e.g. printing)             |  |  |
| 9. GHG emissions attributable to end-of-life-management of products      |  |  |
| 10. Avoided emissions  |  |  |
| <b>Total fossil CO<sub>2</sub> emissions</b>                             | <b>93</b>                                      |  |
